BILIARY Module - is the second module in our Emergency Medicine Series.

This module consists of 1 CD containing 24 cases suitable for both introductory and experienced users.

The Biliary Module demonstrates normal anatomy and normal variants as well as common biliary tree abnormalities.

Some examples of these findings are:

- Gallstones
- Gallbladder Sludge
- Acute Cholecystitis
- Abnormal Size of the Common Bile Duct

Each case simulates a complete clinical experience including Patient History, Physical Examination Data, Learning Tasks and Educational Information.

Included in this CD are Reference Images with Annotations, Transducer Orientation, Sonographic Summaries and Discussions prepared by experts in the field.
Examples of available cases:

- Normal Gallbladder and Biliary Tree
- Gallbladder with Cholecysteryl Crystals
- Gallbladder Empyema
- Stone in Neck of Gallbladder
- Polyp and Gallbladder Septation
- Gallstones
- Dilated Common Bile Duct
- Cholelithiasis, Liver Metastases
